Po Jian

Senior Data Engineer: building data environments people can trust and actually use

Taipei, Taiwan tses89214@gmail.com linkedin.com/in/jiaxuanjian tses89214.github.io
github.com/tses89214 medium.com/@tses89214

SUMMARY

- Data engineer with 5 years of experience in data analysis and data engineering; master's in Industrial and Organizational Psychology.
- Led data warehouse design, an in-house event-tracking tool, an Airflow migration to Kubernetes, a data analysis white paper, and an internal data portal at BenQ.
- Values evidence-driven analysis, empathy when a team changes how it works, and putting data in users' hands.

SKILLS

- **Languages:** Python, SQL
- **Data engineering:** Airflow, PySpark, Kafka, Hadoop, Hive
- **Warehouse / platform:** Databricks, BigQuery, OpenSearch/ELK, MySQL
- **Data governance:** DataHub, data modeling, documentation, ownership practices
- **Cloud:** AWS (S3, SQS, Athena, QuickSight), GCP
- **Infrastructure / monitoring:** Kubernetes, Docker, Linux, Prometheus, Grafana
- **Other:** API platform development, Tableau

EXPERIENCE

Senior Data Engineer, BenQ — May 2024 – Present
- Led event tracking, Airflow on Kubernetes, data warehouse design, a Databricks Genie white paper and an internal Insight Portal (details under Selected projects).
- Developed a shared API platform and a Data QA automation tool (Appium) that reduces analysts' manual work.
- Day to day: refactored existing ETL, operated the related infrastructure, onboarded third-party data sources.

Data Engineer, Pixl Solutions — Aug 2023 – Apr 2024
- Managed and optimized data warehouses on AWS and GCP.
- Operated and troubleshot ELK services (Elasticsearch, Logstash, Kibana).
- Supported cross-department data requests and analysis.

Part-time Teaching Assistant, Alpha Camp (career break) — Apr 2023 – Jul 2023
- Supported live sessions, reviewed assignments, and answered questions for SQL and data courses.

Data Engineer, KKStream — Aug 2022 – Apr 2023
- Built an internal data-processing framework and AWS integrations.
- Refactored a performance-reporting module and designed its metrics.
- Designed dashboards and data visualizations.

Data Engineer, Gamania — Jun 2021 – Aug 2022
- Maintained, optimized and built ETL pipelines.
- Designed a marketing-ad data warehouse and its API integrations.
- Led a data dictionary project with DataHub.
- Built monitoring dashboards in Grafana.

Smart Education Administrator, National Yunlin University of Science and Technology — Mar 2019 – May 2021
- Developed and trained a neural network model for learning-behavior recommendations.
- Built crawlers, notification programs and a LINE bot; designed and analyzed notification-style experiments.
- Integrated and maintained a face-recognition system.
- Analyzed learning behavior on digital platforms; designed eye-tracking and cognitive-psychology experiments.
- Designed a smart classroom (behavior labels, indicators, reports) and improved office processes.

Data Analyst Intern / Assistant, KKday; Hongguang Data — Jul 2017 – Jun 2018
- KKday: maintained a daily price-comparison reporting system with automated report emails, and its crawler.
- Hongguang Data: wrote web crawlers in R and helped clean data; assisted with semantic-system training.

SELECTED PROJECTS AT BENQ

Momotaro, in-house event-tracking tool

- Replaced a legacy Matomo setup running on EC2 with an in-house tool, without requiring changes to the apps that send events.
- Built as microservices on AWS (Python, Flask).

Airflow on Kubernetes, migration and system operations May 2025 – Present

- Migrated Airflow from the Celery executor to the Kubernetes executor.
- Rebuilt monitoring with Prometheus + Grafana and rebuilt backups; ongoing system operations.

Data analysis white paper and Insight Portal, Databricks Genie (Text-to-SQL)

- Built a data analysis white paper using Databricks Genie, which turns plain-language questions into SQL.
- Built an internal Insight Portal to put data in users' hands; strategy and implementation are written up in the Medium series below.

Data warehouse layers, access control and Owner system, team practices

- Designed the data warehouse layers and the access-control model.
- Set team documentation standards, started a project Owner system, and ran a weekly study group.

PERSONAL PROJECTS

Stark Support Bot, LLM guardrails and evaluation Oct 2026

- RAG customer-service bot used as a test bed: added one defense at a time and re-ran the same 28 attacks and 6 normal questions after each step.
- Attacks blocked rose from 16/28 to 28/28 while normal questions stayed 6/6 answerable.
- Method: deterministic canary and doc-fact checks (no LLM judge), 143 labelled classifier cases (137 correct), documented limits.
- Fails closed and escalates to a human; compared embedding models on 90 questions and chose bge-m3 for Chinese.
- Python, FastAPI, MLflow.

agent-perch, open-source supervisor for long-running AI agents (MIT) Oct 2026

- Single-file, standard-library-only Python tool that keeps agent processes (e.g. Claude Code bots) alive.
- Restarts dead sessions, answers known dialogs, detects frozen prompts, and halts crash loops (3 restarts in 10 minutes) with alerts.
- File-based mailbox for agent-to-agent messages and a small dashboard; generalized from a watchdog on a live Raspberry Pi agent fleet.

WRITING

- **The Evolution of Our Data Team** (Medium, Chinese and English): a series on how a data team grows.
- Culture (Owner system); technical (serving API platform, event tracking and QA, Airflow on Kubernetes, operations); AI (insight reports and the Insight Portal).

EDUCATION

- **M.A., Industrial and Organizational Psychology**, National Chengchi University (Sep 2016 – Mar 2019)
- **B.A., Psychology**, National Chung Cheng University (Sep 2012 – Jun 2016)

CERTIFICATIONS AND TRAINING

- Databricks Certified Data Engineer Associate (May 2026)
- AWS Certified Data Engineer – Associate (Feb 2024)
- Google Cloud Associate Cloud Engineer (Apr 2023)
- Coursera AWS Fundamentals specialization, 4 courses (Sep 2022)
- iPAS Junior Big Data Analyst (Dec 2018); BI and Big Data Analyst training, 261 hours (2018)
