## SUMMARY

- Data engineer with 5 years of experience; master's in Industrial and Organizational Psychology.
- At BenQ: led data warehouse design, an in-house event-tracking tool, Airflow on Kubernetes, and an AI-assisted data portal.

## SKILLS

- **Languages:** Python, SQL
- **Data:** Airflow, PySpark, Kafka, Databricks, BigQuery, OpenSearch/ELK
- **Cloud and infrastructure:** AWS, GCP, Kubernetes, Docker, Prometheus, Grafana
- **Governance:** DataHub, data modeling, documentation

## EXPERIENCE

**Senior Data Engineer**, BenQ — May 2024 – Present

- Led the projects below; also built a shared API platform and a Data QA automation tool (Appium).
- Day to day: ETL refactoring, infrastructure operations, onboarding third-party data sources.

**Data Engineer**, Pixl Solutions — Aug 2023 – Apr 2024

- Managed and optimized data warehouses on AWS and GCP.
- Operated and troubleshot ELK services (Elasticsearch, Logstash, Kibana).

**Data Engineer**, KKStream — Aug 2022 – Apr 2023

- Built an internal data-processing framework and AWS integrations.
- Refactored a performance-reporting module and designed dashboards.

**Data Engineer**, Gamania — Jun 2021 – Aug 2022

- Maintained and built ETL pipelines; designed a marketing-ad data warehouse.
- Led a data dictionary project with DataHub.

**Smart Education Administrator**, National Yunlin Univ. of Science and Technology — Mar 2019 – May 2021

- Trained a neural network model for learning-behavior recommendations.
- Built crawlers, a LINE bot and notification experiments.
- Designed a smart classroom: behavior indicators, reports and workflows.

## EDUCATION

- **M.A., Industrial and Organizational Psychology**, National Chengchi University (2019)
- **B.A., Psychology**, National Chung Cheng University (2016)

## CERTIFICATIONS

- Databricks Certified Data Engineer Associate (2026)
- AWS Certified Data Engineer – Associate (2024)
- Google Cloud Associate Cloud Engineer (2023)

## SELECTED PROJECTS AT BENQ

**Momotaro**, in-house event-tracking tool 2025

- Replaced a legacy Matomo setup on EC2 without requiring changes to the apps that send events.
- Built as microservices on AWS (Python, Flask).

**Airflow on Kubernetes** 2025 – Present

- Moved Airflow from the Celery to the Kubernetes executor.
- Rebuilt Prometheus + Grafana monitoring and backups; ongoing system operations.

**Data analysis white paper and Insight Portal**, Databricks Genie 2026

- Wrote a white paper on Text-to-SQL with Databricks Genie.
- Built an internal Insight Portal that puts data in users' hands.

**Data warehouse layers and Owner system** 2024 – Present

- Designed the warehouse layers and the access-control model.
- Set documentation standards; started a project Owner system and a weekly study group.

## PERSONAL PROJECTS

**Stark Support Bot**, LLM guardrails and evaluation 2026

- Added defenses to a RAG support bot one at a time: attacks blocked rose from 16/28 to 28/28 while 6/6 normal questions stayed answerable.
- Deterministic checks (no LLM judge), 143 labelled classifier cases, documented limits.
- Fails closed and escalates to a human; chose bge-m3 after comparing embedding models.

**agent-perch**, open-source AI agent supervisor 2026

- Single-file, standard-library Python tool that restarts dead agent sessions and handles frozen prompts.
- Halts crash loops with alerts; file-based mailbox and a small dashboard.

## WRITING

- **The Evolution of Our Data Team**: a bilingual Medium series on how a data team grows.
- Covers culture (Owner system), technical platform (API platform, event tracking, Airflow) and AI (insight reports).

## COLLEAGUE FEEDBACK

- “Built several cloud-service management mechanisms with systematic documentation, and communicated them well, so the team works by shared rules rather than goodwill.” (PM, peer feedback survey)
- “The gentlest, most patient and most problem-solving engineer I have worked with.” (Data engineer, peer feedback survey)
